CERTIFICATE

This is to certify that the project report entitled **Talent Flex** submitted to "**Bhakta Kavi Narsinh Mehta University**". In partial fulfillment of the requirement for the award of the degree of BCA 5th semester is an original work carried out by **Miss. Vaibhavi J. Vaghasiya (2024008456) and Miss. Urmi M. Usdad (2024008448)** under the guidance. The matter embodied in this project is authentic and is genuine work done by the student and has not been submitted whether to this university or to any university / institute for the fulfillment of the requirement of any courses of study.

Submitted to the **Shree V. N. Borad Mahila BCA College** in partial fulfillment of the requirements for the degree of BCA.

ACKNOWLEDGEMENT

We are very thankful to all those who have helped for preparing this project. First of all we would like to thanks "**Bhakta Kavi Narsinh Mehta University**" and our college s"**Shree V. N. Borad Mahila BCA College Joshipura – Junagadh"** who give us an opportunity to prepare a project.

We would like to thanks **Prof. Rimpal Domadia**, Head of Department in college who provided good environment of project development. We would like to thanks specially faculty Professor **Prof. Purvi G. Abhani** who have always inspired us and has directed us towards the successful completion of this project. Our special thanks to Professor, they have guided to develop this project with proper methods and techniques and with good skills. And Thanks to all who helped for this project development.

Yours Faithfully,

(1) Vaibhavi J. Vaghasiya

(2) Urmi M. Usdad

PREFACE

The theoretical knowledge can be visualized when we implement it because it is the real requirement of Market. Our B.C.A. is unique in itself satisfying almost all the requirement that one requires for a successful IT education. It is always better to show it in deeds rather than words.

According to the syllabus subscribe by "**Bhakta Kavi Narsinh Mehta University**" In 5th semester, we have developed one project on particular subject. It is a group work. The project work will make us more closely to the real world of information. It will be a little bit training that how to develop website. Project work is the implementations of theory which, we had learn in previous semester.

It is the great moment for us to present this report & we feel really a great pleasure because it is the result of very hard work. This report is basis on the information which is collected by us.

We have taken the care about the project that all given information is true, and the project is smooth running project without any error or problem. We are very apologies if any wrong information is given.

ABSTRACT

The **Job Portal System** is a web-based application developed using **PHP** as the front end and **MySQL** as the back end. The main objective of this project is to provide a platform where job seekers can search for suitable jobs and companies can post job vacancies easily. Users can search jobs based on skills and location, while companies can add and manage job listings through a simple interface.

This project includes features such as **user registration and login, company registration, job posting, job search, and job listing**. It provides a user-friendly interface that makes the recruitment process faster and more efficient. The Job Portal System acts as a central database for job opportunities, helping connect employers with job seekers in a simple, secure, and organized way.

1.2 Introductions: -

Title: TalentFlex – Job Portal

TalentFlex is a web-based Job Portal developed using PHP and MySQL. The main objective of this project is to provide an online platform where job seekers and employers can connect easily and efficiently.

Job seekers can register, log in, create their profiles, upload resumes, search for suitable jobs, and apply online. Employers can register their companies, post job vacancies, manage job listings, and review applications submitted by candidates.

The project also provides an Admin Panel for managing users, employers, job categories, job postings, applications, feedback, and contact messages. TalentFlex reduces manual recruitment work, saves time, improves communication between recruiters and applicants, and provides a secure and user-friendly recruitment platform.

1.3 Scope : -

- Provide an online recruitment platform for job seekers and employers.
- Allow employers to post and manage job vacancies.
- Allow job seekers to search and apply for jobs.
- Maintain candidate profiles and resumes.
- Provide an Admin Panel for managing users, companies, job categories, and applications.
- Develop a responsive website that works smoothly on desktops, tablets, and mobile devices.

1.4 Objective: -

- To simplify the recruitment process.
- To provide an online platform for employers and job seekers.
- To allow employers to post job vacancies easily.
- To enable candidates to search and apply for jobs online.
- To maintain secure user and company information.
- To reduce paperwork and improve recruitment efficiency.

1.5 Advantages: -

- Easy online job searching.
- Simple job posting for employers.
- Resume upload facility.
- Fast recruitment process.
- User-friendly interface.
- Secure login and registration.
- Available 24×7 from anywhere.

1.6 Limitation: -

- Internet connection is required.
- Fake job postings require admin verification.
- Resume upload size may be limited.
- Email verification depends on internet connectivity.
- Online recruitment cannot completely replace face-to-face interviews.

1.7 Pages: -

- Admin side :-
  - Dashboard
  - Login
  - Manage-companies
  - Job-Categories
  - Applications
  - Contact messages
  - Feedbacks
- User side :-
  - Home
  - About Us
  - Search Jobs
  - Jobs Details
  - Apply job
  - My Applications
  - Contact Us
  - Register
  - Feedback

- Company Side :-

  - Home
  - Register
  - Login
  - Dashboard
  - Add Company
  - Job-Manage
  - View
  - User Details
  - Feedback

2 REQUIREMENT ANALYSIS

2.1 Tools & Technology: -

2.1.1 PHP:-

- PHP stands for "Hypertext Pre-Processer". Its original name is "Personal Homepage".
- PHP is a server-side scripting language and supports many database like.., MYSQL, Informix, Oracle, Generic ODBC, etc.
- Its HTML embedded scripting language. The goal of the language is to allow web developers to write dynamically generate pages quickly.
- PHP is an official module of Apache HTTP server.
- PHP is fully Cross-Platform.
- By the middle of 1997, PHP was being used on approximately 50,000 sites worldwide

❖ Advantages of PHP:-

- Easy and simple to learn
- Extremely flexible
- Open Source
- Powerful library supports
- Built-in database connection modules

2.1.2 My Sql: -

- MYSQL is the world's most widely used open source relation database management System.
- It is named after co-founder Michael widenious's daughter.

❖ Advantages of MySQL : -

- Open source
- Very fast, reliable, and easy to us
- Runs on a server
- Used for web application
- Ideal for both small and large application

2.1.3 Java Script :-

- Its object oriented language
- There doesn't require any special or separate editor for programs to be writer edited or compiled.

- Java scripting can generate HTML dynamically on the client.
- Java has no required any other platform because it is platform independent.
- Java is an interpreted Language.
- Java is easy to learn
- Java is designed for simple & small program.

2.1.4 CSS:-

- CSS stands for Cascading Style Sheet.
- CSS is a style languages used for describing the presentation semantics of a document written in a mark-up language.
- CSS is design primarily to enable the separation of document content from document presentation including element.
- CSS used in three format :

1. Inline
2. Internal
3. External

2.1.5 XAMPP : -

- XAMPP stand for cross platform apache, mysql, php and perl
- XAMPP is simple light weight apache server
- XAMPP is a offend in both a full and a standard version

2.2 Hardware & Software Requirements :

2.2.1 Hardware :-

Hardware	Specification
Hard Disk	500 GB
Processor	3030 GHz
RAM	4.00 GB

2.2.2 Software : -

Software	Specification
Operating System	MS Windows 10
Tools	Macromedia Dreamweaver
Back - End	MY SQL
System Type	64 bit OS

2.3 User Characteristics:-

- At the Job Portal, we welcome job seekers, employers, and recruiters from various industries. Our platform is designed to meet different user needs, making the recruitment process simple, efficient, and user-friendly.
- Here are the different types of users who use the system:

1. Job Seekers
2. Employers
3. Recruiters
4. Administrators (Admin)

- **Job Seekers:** search for jobs, create resumes, apply for vacancies, and track their applications.
- **Employers:** post job openings, review applications, and manage the hiring process.
- **Recruiters:** help organizations find suitable candidates and manage recruitment activities.
- **Administrators:** manage users, job postings, and ensure the system operates smoothly and securely.

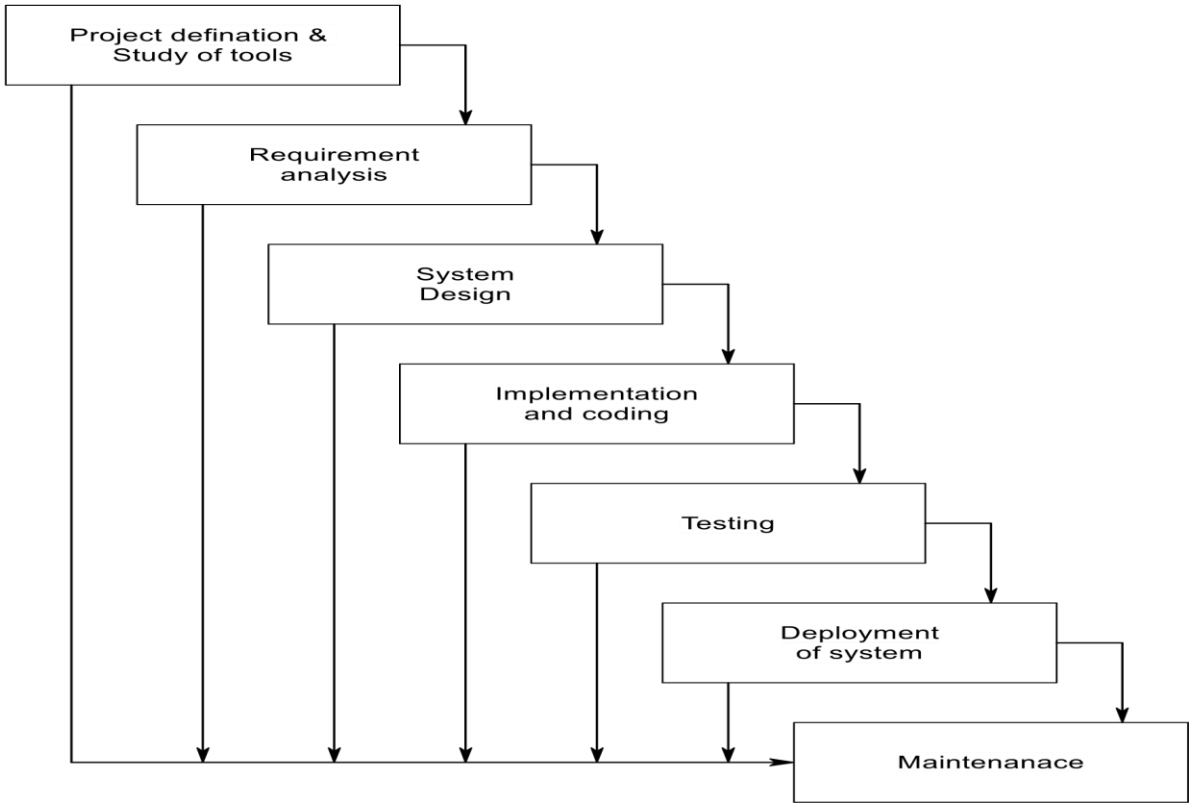

- Each user is provided with role-based features and access, ensuring a secure and efficient job recruitment experience.

3.PROJECT PLANNING

- We referred the tutorials from Internet with the help of them; we can make project more efficient & more reliable
- Project planning is part of project management which related to the use of schedules such as Gantt chart to plan and subsequently report progress within the project environment.
- Following this step, the durations for the various tasks necessary to complete the work are listed and grouped in to a work are breakdown structure.

3.1 Waterfall Model :-

- The waterfall model was first process model to be introduction it is also referred to as a liner sequential lifecycle model.
- It is very simple to understand and use in a waterfall model, each phase must be completed be for the next phase can being and there is no overlapping in the phases.

3.1.1 Project Definition & Study Tools :

- Our Project is basically used for to do business and provide business for people.

3.1.2 Requirements Analysis :

- The requirements gathering process makes stronger and focused specifically onbusiness activities understanding requirement, an analyst can have clear idea about the nature of the software including function behavior, performance and interface requirements for the system recorded and evacuated with the user.

3.1.3 System Design :

- Software design shows following four distinct components of a program.
  - Database Design
  - Software Architecture
  - Interface Design
  - Algorithm

- The process converts requirements into a symbolic representation of the software that can be used for static testing before coding like requirement the design is documented and turns out to be part of the software configuration

3.1.4 Implementation of Coding :

- The design must be converted into a machine, program the code generation step done this task. If design is performed in a correctly code generation can be done speedy and with more efficiency.

3.1.5 Testing :

- Once code developed program testing can be started. The testing process Covered by static and dynamic way. It also covers structure and functional testing. For quality testing also covers non-functional requirements.

3.1.6 Deployment of System :

- Once the functional and non-functional testing is done the product deployed in the customer environment or released in to the market.

3.1.7 Maintenance :

- There are some issues which come up in the client environment to fix those issues patches are released maintenance is done to deliver these changes in the customer environment.

3.2 Project Scheduling :-

- Project scheduling is corned with the techniques that can be employed to manage the activity that need to be undertaken during the development of a project.

Sr.no	Activity	Starting Date	Completion Date
1	Information Gathering	01-Jul	11-Jul
2	Requirement Analysis	12-Jul	18-Jul
3	Project Planning & Scheduling	19-Jul	25-Jul
4	System Design & Form Design	26-Jul	20-Aug
5	Coding & Implementation	21-Aug	12-Sep
6	Testing	13-Sep	25-Sep
7	Documentation	01-Jul	25-Sep

3.3 Gantt Chart :

Task Date & Time	01 Jul to 11 Jul	12 Jul to 18 Jul	19 JulTo 25 Jul	26 Jul to 20Aug	21 Au gto 12 Sep	13 Sep to 25 Sep	01 Jul to 25 Sep

Impletation & coding							
Testing							
Documentation							

4 FEASIBILITY STUDY

- The initial investigation points to the question whether the project is feasible a feasibility is conducted to identity the best system that meets the all the requirements this includes an identification description and evaluation of the proposed system and selection of the best system for the job.
- The requirement of the system is specified with a set of constraints. Such as system objective and the description of the output. If is then duty of the analyst to evaluate the feasibility of the proposed system to generate the above results.

4.1 Technical Feasibility :-

- Technical current of technology supports the proposed system. The current setup is sufficient for the processing of the kind tasks.
- Management agreed to purchase extra devices for latest technology if necessary.
- The software needed to important and execute the system are already existing.
- Technical analysis evaluation technical merits of the system at the same time collecting additional information about performance, reliability, maintainability and productivity.

4.2 Operational Feasibility:-

- The proposed system will fulfill the company's quarrymen.
- The proposed system covers all aspect of the current Manual system.
- The human sources required number of staff operationally for the company.
- Proposed system is helpful for all the users associated with the organization.
- The decision making process of their will also become faster with the use of data integration, consolidation so it is feasible to implement the system.

4.3 Social Feasibility :-

- Social feasibility addresses the influences that a proposed project may have on the social system in the project environment.
- It should be recognized that workers in certain industries may have certain status system within the society.
- The ambient social structure may be such that certain categories of workers may be in short supply or non-existent.
- The stages in social assessment are:
  - ✓ Develop an effective public plan to involve all potentially affected public.
  - ✓ Scoping to identify the full range of probable social impacts.

4.4 Organizational Feasibility :-

- I have organizational feasibility as meaning whether the new system will fit in to the organization and meet the current goals and objectives.
- This involves questions such as whether the system has enough support to be implemented successfully whether it brings an excessive amount of change and whether the organization is changing two rapidly to it.
- Two of important factors in this are: -
  - ✓ The passion that the sole entrepreneur or management team has for the business idea.
  - ✓ The extent to which the management team or sole entrepreneur understand the markets in which the firm will participate

4.5 Economic Feasibility :-

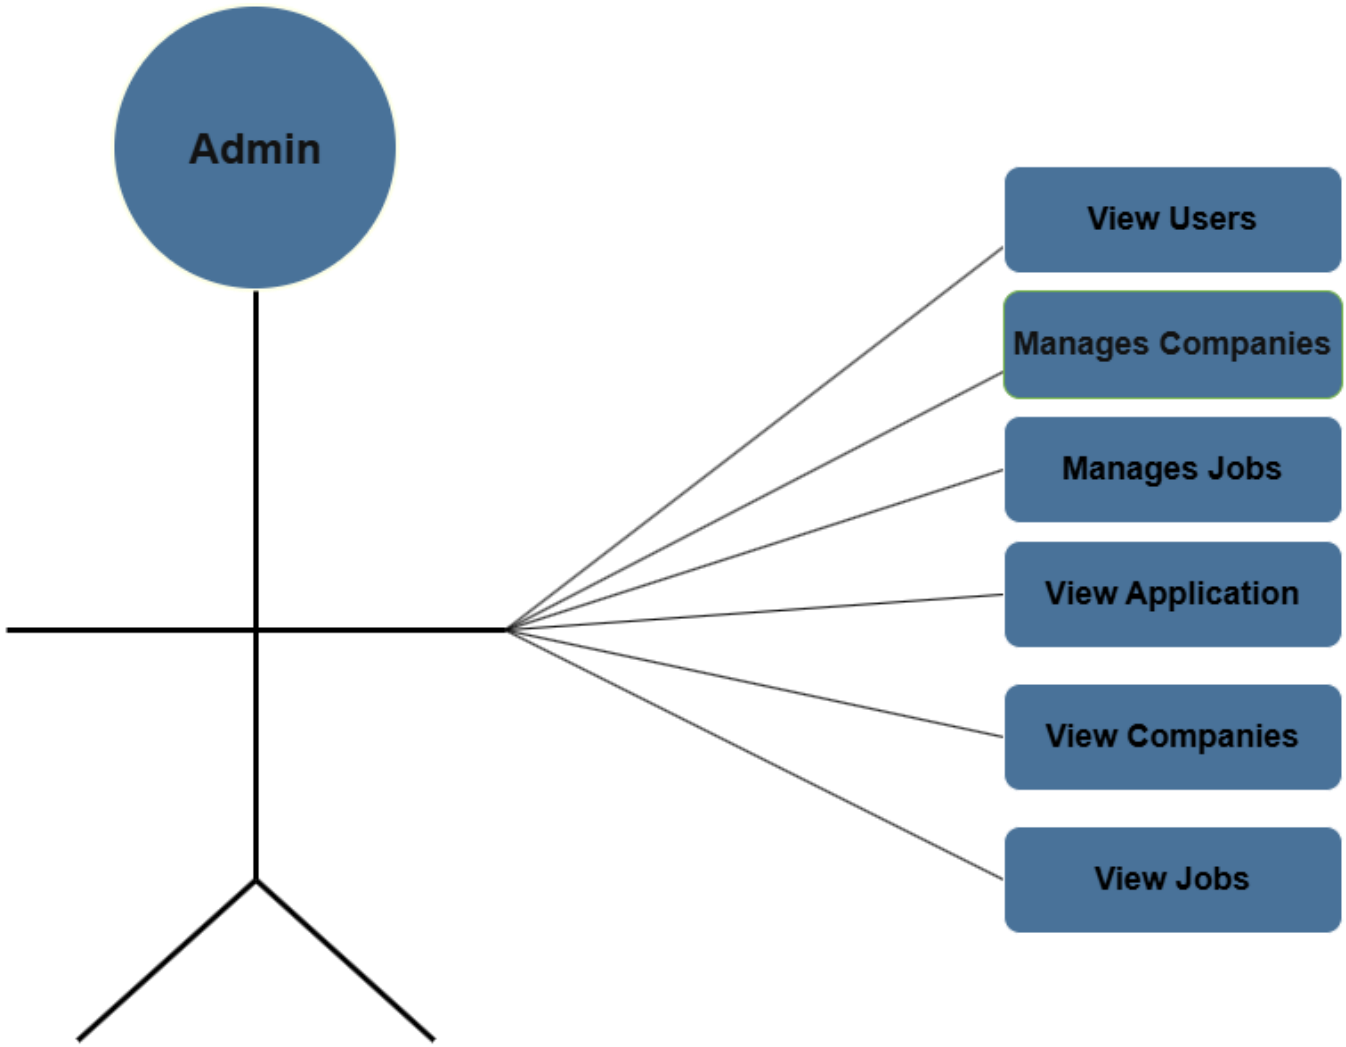

- Economic feasibility is the most important and frequent used method for evaluating the effectiveness of the proposed system.
- It is very essential the main goal of the proposed system is to have economically better result along with increased efficiency cost benefit analysis is usually performed for the purpose.
- It is the comparative study of the cost versus the benefit and savings that are expected from the proposed system, since the organization is well equipped with the organization is well equipped with the required hardware the project was found to be economically.
- Cost Estimation:
  - ✓ Working the estimation is given :
  - ✓ 3Months and 3 days = 95 days
  - ✓ Hours 1 days = 95 * 4 = 380 / 24 = 16 days
  - ✓ Now , the expense & cost estimation :

Light Bill	**6000**
Energy charge	**3000**
Database design	**4000**
Coding	**2000**
Internet connection	**5000**
Extra activity	**2000**
Total	22,000 Rs.

5.2 DFD (Data Flow Diagram) :

- Data is the life blood of any system. Diagram of flow of data in system and its processing which converts data into valuable information in known as data flow diagram. It will not show logic of the algorithm its shows only flow of the data from the process to the process or from the table or from external source to the external source to the external destination.

5.4 Data Dictionary :

- The Data Dictionary can be specifically defining as an exhaustively organized list of all data elements that are pertinent to the system with precise, rigorous understanding of inputs and outputs and the components of stores along with all the constraints and intermediate calculations.
- In other words, a data dictionary is a catalogue – a repository of element in a system. Here in a data dictionary one can find list of all the elements composing the data flowing through a system. The major elements are data flows, data stores and process.

❖ Importance of data dictionary : -

- ✓ To manage the details in large system.
- ✓ To communicate a common meaning for all system elements.
- ✓ To document the features of a system. To facilitate analyst for the details in order to evaluate system requirements
- ✓ Following is the list of Tables which are used in my project. Consider Following Data Dictionary which denotes tables detail.

- ❖ city
- ❖ registration
- ❖ user_profile
- ❖ contact_messages
- ❖ comadd_job
- ❖ application
- ❖ companyreg

➢ city :

Field name	Data type
C_Id	Int(11)
C_name	varchar(200)

➢ registration:

Field name	Data type
Id	Int(50)
Name	varchar(50)
Email	varchar(50)
Password	varchar(10)
PhoneNumber	Bigint(10)
Gender	varchar(5)
City	varchar(50)
U_Type	varchar(50)

- **user_profile:**

Field name	Data type
id	Int(11)
User_id	Int(11)
Qualification	varchar(100)
Passing_year	varchar(40)
Skills	Text
Experience	varchar(100)
Resume	varchar (255)

- **contact_messages :**

Field name	Data type
id	Int(11)
Name	varchar(100)
Email	varchar(100)
Subject	varchar(200)
Message	Text
Created_at	TimesTamp

- **comadd_job:**

Field name	Data type
id	Int(20)
Com_name	varchar(30)
Job_title	varchar(40)
Job_type	varchar(40)
Location	varchar(50)
Salary	Int(50)
Description	Text
Views	Int(11)

- **application:**

Field name	Data type
id	Int(100)
Job_id	Int(100)
Company_name	varchar(100)
User_id	Int(11)
User_name	varchar(100)
Email	varchar(100)
Mobile	bigint(10)
Education	varchar(50)
Experience	varchar(100)
Skills	varchar(255)
Resume	varchar(255)
Apply_date	date
Status	varchar(255)

- **companyreg:**

Field name	Data type
Cid	Int(20)
Name	varchar(18)
Email	varchar(25)
Mobile	Int(10)
Address	varchar(25)
Industry	varchar(200)
Password	varchar(20)

6 DATABASE NORMALIZATION

➢ Normalization :

- ➢ Normalization is the first step to design any database.
- ➢ Normalization is a database design technique which organize tables in a member that reduces redundancy and dependency of data. There are three types of normalization: -
  - ✓ 1NF
  - ✓ 2NF
  - ✓ 3NF

➢ 1st NF:

- ➢ 1Nf means First Normalization Form.
- ➢ There are two rules of 1NF.
- ➢ First create a separate table for each set of related data.
- ➢ Identity each set of related data with primary key.
- ➢ All attributes are single values and non-repeating.

Table : registration

Field name	Data type	Size
Id	Int	11
Name	Varchar	50
Email	Varchar	50
Password	Varchar	10
PhoneNumber	Varchar	20
Gender	Varchar	5
City	varchar	50
U_type	varchar	50

Table : User_profile

Field name	Data type	Size
id	Int	11
User_id	Int	11
Qualification	Varchar	100
Passing_year	Varchar	40
Skills	Text	-
Experience	Varchar	100
Resume	Varchar	255

Table : Contact_message

Field name	Data type	Size
id	Int	11
Name	Varchar	100
Email	Varchar	100
Subject	Varchar	200
Message	Text	-
Created_at	TimesTamp	-

Table : comadd_job

Field name	Data type	Size
id	Int(20)	20
Com_name	varchar(30)	30
Job_title	varchar(40)	40
Job_type	varchar(40)	40
Location	varchar(50)	50
Salary	Int(50)	50
Description	Text	-

Table : companyreg

Field name	Data type	Size
Cid	Int	20
Name	varchar	18

- **2nd NF:**
  - 2NF means second normal form.
  - Create separate table for sets of values that apply to multiple records.
  - Records should not depend on anything other than a table's primary key.
  - Create relationship between these new tables and their predecessors through the use of foreign keys.
  - Remove subset of data that apply to multiple rows of a tables and place them separate table.

Table : registration

Field name	Data type	Size
Id	Int(50)	Primary key
Name	varchar(50)	
Email	varchar(50)

- **3rd NF:**
  - 3NF means Third Normal Form.
  - Eliminate fields that do not depend on the primary key.
  - Each non-primary key attribute must depend only on the primary key.
  - The database should satisfy all the requirements of 1NF and 2NF.
  - In TalentFlex Job Portal, user details, company details and job details are already maintained in separate tables.
  - To remove redundant data from the **application** table, we can divide the application-related information into separate tables.

Table : registration

About Our Platform
Empowering Careers Through TalentFlex
A centralized digital placement and career ecosystem bridging ambitious students with high-growth enterprise recruiters.
OUR CORE MISSION
Modernizing Campus Recruitment for Higher Education
TalentFlex was developed to solve the logistical and communication challenges faced by college placement cells, candidates, and visiting recruiters. By replacing fragmented spreadsheets and manual resume sorting with a centralized, data-driven platform, we ensure that every qualified student gets equal access to verified job opportunities.
Whether you are an engineering fresher seeking your first tech internship, or a corporate talent team looking for certified graduates, TalentFlex streamlines the entire hiring pipeline.

ECOSYSTEM VALUE
Tailored for Every Stakeholder
For Students & Alumni
Build a certified digital resume, discover verified openings categorized by technical skills, apply in one click, and track your selection status in real-time.
For Corporate Recruiters
Post internships and full-time jobs easily, screen candidate resumes, schedule interview slots, and communicate directly with applicants.
For Placement Cell Admins
Monitor on-campus hiring drives, supervise company listings, oversee student eligibility, and generate verified placement records.

8 SOFTWARE TESTING

- Software testing in values the executing of a software component or system component of evaluates one or more properties of interest.
- Meet the requirements that guided its design the development. Responds correctly to all kinds of inputs. Perform its function whether on acceptable time. Is sufficiently usable.

8.1 Types of Testing :-

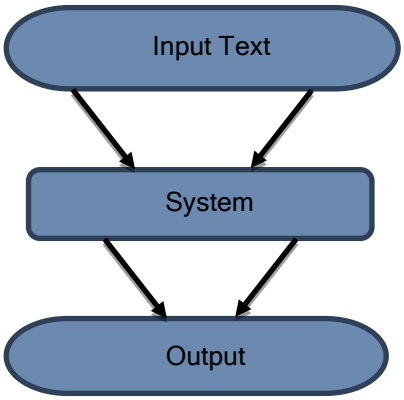

- ✓ White Box Testing
- ✓ Black Box Testing
- ✓ Validation Testing
- ✓ Alpha
- ✓ Beta
- ✓ Manually

8.1.1 White Box Testing :

- As per our project, we have used white box testing model because independent paths of PHP file and loop are the cornerstones of the vast majority of all algorithms implemented in the software.
- White box testing sometime called glass box testing.

8.1.2 Black Box Testing :

- It takes an external perspective of the test object to derive test cases. These tests can be functional or non-functional, though usually functional.
- The test designer selects valid and invalid input and determines the correct output.
    - Interface errors.
    - Errors data structures or external data base access.
    - Behavior or performance errors.
    - Initialization and termination error.

8.1.3 Validation Testing :

- In validation testing, the software is assembling as a package. Validation testing is completely associated with requirement satisfaction of customers. According to this test, project is tested and found to be satisfactory for functional characteristic, behavioral characteristics and performance requirement.

8.1.4 Alpha :

- Alpha is the first letter of the Greek alphabet. In the system of Greek numerals, it has value of 1. It was derived from the Phoenician letter alpha.
- Letter's that arose from alpha include the Latin A and Cyrillic letter A. in English, the noun" Alpha" is used as a synonym for "beginning", or" first", Reflecting its Greek roots.

8.1.5 Beta :

- Beta is the second latter or the Greek alphabet. In system of Greek numerals has valued has of 2. In ancient Greek, beta represented the voiced bilabial plosive. In modem Greek it represents the voice labiodentals fricative. Letters that arose from beta include the roman letter (B) and Cyrillic letter (5) and (B).

8.1.6 Manually :

- We have done manual testing for over project all the web pages validation, redirection, navigation are manually test by us.

8.2 Test Strategy :

- A test strategy is an outline that describe testing approach of the software development cycle. it is created to inform project manages, testers, and developers about some key issues of the testing objective, methods of testing new functions, total time and resources required for the project, and the testing environment.
- Design document describe the functionality of the software to be enabled in the upcoming release's corresponding test strategy should be created to test the new feature sets.

8.3 Test Case :

- A test case is a set of conditions or variable under which a tester will determine whether a system under test satisfies requirements or works correctly. The process of developing test case can also help find problems in the requirements or design of an application.
    - Formal test case
    - Informal test case
    - Typical written test cases
    - Error Handling

8.3.1 Formal Test Case :

- The formal test case is order to fully test that all the requirements of an application are met, there must be at least two test cases for each requirement positive test and one negative test.
- If a requirement has sub-requirements, each requirement must haveat least two test cases.
- A formal test-case is characterized by a known input and by an expected output, which is worked out before the test is executed.

8.3.2 Informal Test Case :

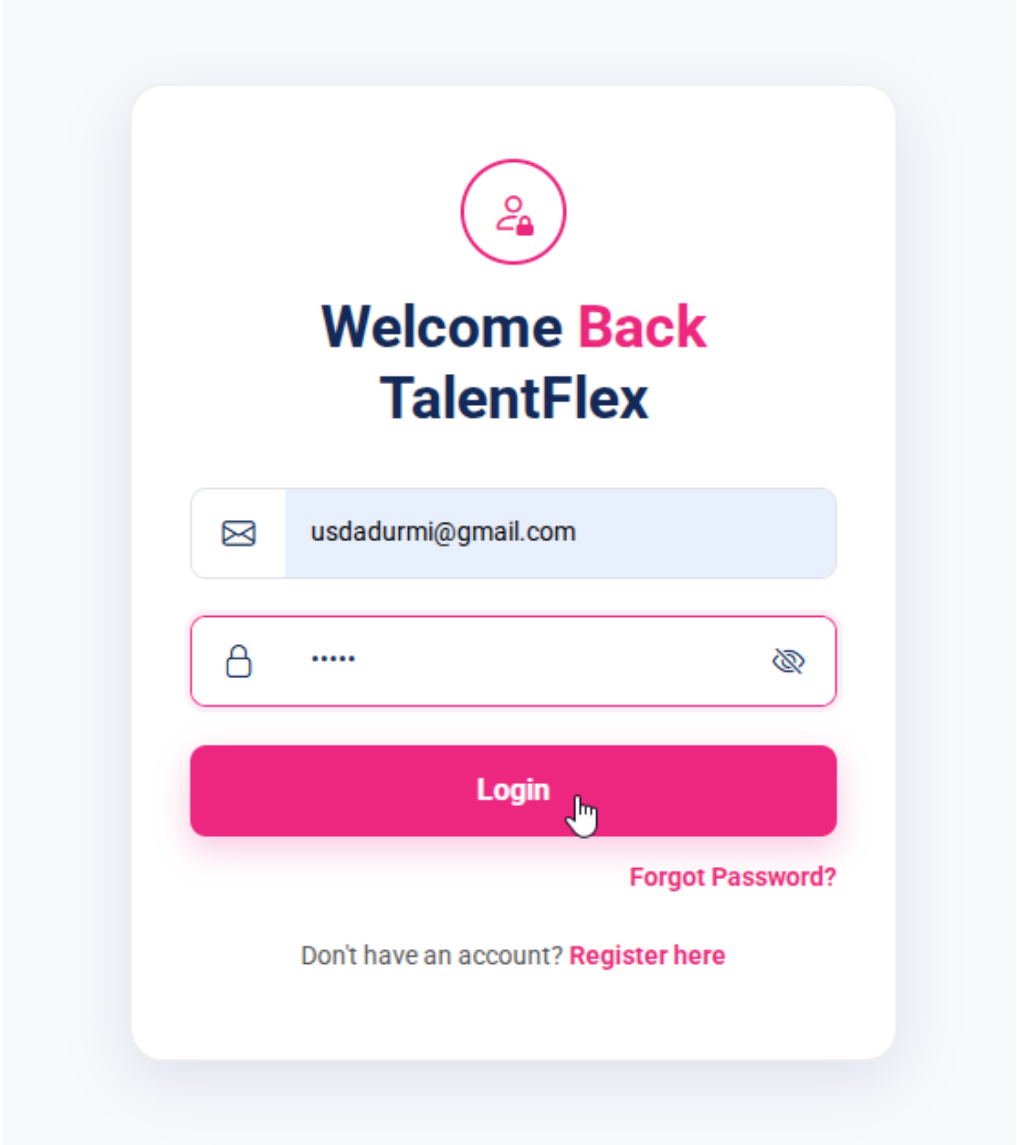

- Information is valuable because it can affect behavior , decision, or an outcome.
- For example, if a manager is told her company's net profit decreased in the past month, he may use this information as a reason to cut financial spending for the next month.
- A piece of information is considered valueless if, after receiving it, things remain unchanged. For a technical definition of information see information theory.

8.3.3 Typical Written Case :

- A test case is usually a single step, or occasionally a sequence of steps, to test the correct behavior/functionally, features of an application. An expected result or expected outcome is usually given.
- A written test case should also contain a place for the actual result. The larger test case may also contain prerequisite states or steps, and descriptions.
- These steps can be stored in a word processor document, spreadsheet, database or other common repository.

8.4 Error Handling :

- ERROR 1: Validation Error
- SOLUTION : Except Valid Password

- **ERROR 2**: Login Error
- SOLUTION: Only authenticate person and logged person can access our site.

9 PROJECT IMPLEMENTATION

- Project implementation means converting the planned requirements and design into a working application.
- **TalentFlex** is implemented as a web-based Job Portal that connects **Job Seekers, Companies, and Admin** on a single platform.
- The system includes important modules such as **Registration, Login, Job Search, Job Posting, Job Application, Profile Management, Resume Upload, and Application Management**.
- The implementation focuses on making the job searching and recruitment process **simple, fast, and user-friendly**.

9.1 User to function :

- TalentFlex provides different functions according to the type of user. The main users of the system are **Admin, Company, and Job Seeker**.

9.1.1 Admin:

- Admin is responsible for managing and controlling the TalentFlex Job Portal.
- Admin can view and manage users, companies, and job details.
- Admin can add, update, and delete job-related information.
- Admin can manage registered users and company accounts.
- Admin can monitor job postings and applications.
- Admin helps maintain the database and keeps the system secure and reliable.

9.1.2 User :

- A job seeker can register and login to the TalentFlex application.
- User can create and manage their profile.
- User can search for suitable jobs according to skills and location.
- User can view complete job details.
- User can apply for suitable jobs online.
- User can upload their resume while applying.

9.1.3 Company :

- Company can register and login to the TalentFlex system.
- Company can create and manage its company profile.
- Company can **post new job vacancies** with details such as job title, location, salary, job type, and required skills.
- Company can update or delete its job postings.

9.2 Secutity Features :

- Security is an important part of the TalentFlex Job Portal because it protects user and company information.
- Username and password are used to authenticate registered users.
- Different access permissions are provided for Admin, Company, and Job Seeker, so users can access only the functions allowed for their role.
- Only Admin can manage important system data and user/company accounts.
- Company and Job Seeker information is protected from unauthorized access.

10 LIMITATION AND FUTURE ENHANCEMENTS

10.1 Limitation :-

- TalentFlex currently has limitations in job recommendations, as it does not yet provide an advanced AI-based system to recommend jobs according to the user's skills, experience, and interests.
- TalentFlex currently has limitations in resume management, as users cannot yet create and build a professional resume directly within the portal.
- TalentFlex currently has limitations in real-time communication, as there is no integrated chat system between job seekers and recruiters.
- TalentFlex currently has limitations in application tracking, as users may not receive detailed real-time updates about every stage of their job application.
- TalentFlex currently has limitations in job verification, as all job postings may not have an advanced verification system to identify fake or suspicious job opportunities.

10.2 Future Enhancements :-

- In future, TalentFlex will provide AI-based job recommendations according to the user's skills, qualifications, experience, and interests.
- In future, TalentFlex will provide a Resume Builder, allowing job seekers to create and download professional resumes directly from the portal.
- In future, we plan to introduce a real-time chat system that will allow recruiters and job seekers to communicate easily.
- In future, TalentFlex will provide an advanced application tracking system, where candidates can check their application status such as Applied, Shortlisted, Interview, Selected, or Rejected.
- In future, we will introduce a job verification system to help identify and remove fake or suspicious job postings and provide a safer platform for job seekers.
- In future, TalentFlex will provide email and notification services to inform users about new job opportunities, application updates, interviews, and recruiter messages.
- In future, TalentFlex will introduce skill-based filtering and matching, helping recruiters find suitable candidates based on their skills and qualifications.

11 CONCLUSION

- At TalentFlex, we are dedicated to providing a simple, efficient, and user-friendly platform for connecting job seekers with suitable job opportunities.
- With our easy-to-use online job portal, users can search for jobs based on their skills, qualifications, experience, and preferred job roles.
- sOur platform provides a convenient way for job seekers to view job details and apply for suitable positions from a single platform.
- To access personalized features and manage job applications, users can securely register and log in to their TalentFlex account.
- TalentFlex offers a variety of job opportunities categorized according to different roles, skills, and requirements, making the job search process easier.
- Recruiters can also use the platform to post job vacancies and find suitable candidates according to their requirements.
- As we continue to improve and expand our services, our mission remains clear: to make the job search and recruitment process easier, faster, and more efficient.
- With the support of job seekers and recruiters, TalentFlex aims to create a reliable platform where candidates can discover better career opportunities and companies can find the right talent.
- Join TalentFlex to discover new career opportunities and experience a simple, smooth, and personalized job-search journey from searching for a job to applying for the right opportunity.
